**Thickness:** 3.0mm, 5.3mm, 6.0mm

**Size:** 49" x 97" standard,  
other sizes available for  
two truckload quantities

Perforating, painting, and laminating  
available upon request

See reverse for physical properties comparisons

Down River stocks a wide selection of hardboard products in both standard and tempered grades for every conceivable use. In addition to hardboard Down River also stocks an array of thin MDF panels as well as our new Rigid-Cor. Our ability to paint, laminate, perforate, cut to size and machine, make us the one stop shop for your thin panel needs. Down River distributes the best quality of S1S hardboard found throughout the world to meet your every demand. Panels are available in 1/8", 3/16" and 5.3mm thickness.

In addition to screen back hardboard, Down River also carries a smooth 2-sided product called Rigid-Cor. Rigid-Cor will meet or exceed most of the physical properties for tempered hardboard and was developed for use where surface quality and integrity are required for pre-finishing or laminating. Benefits of Rigid-Cor include better machining because of superior flatness, better thickness tolerances because it is sanded 2 sides, lighter in weight, and the smoother face will result in less surface defects. Rigid-Cor is recommended for interior use only.
