- Smooth or embossed mechanically, chemically or optical

In an effort to offer our customers with even greater selection, value and service, Down River complements their vinyl and pre-finished panels with a full line of Melamine and Foil paper laminates. Recent new technological advances in the decorative paper industry have made these 30-60 gram low basis weight, or lightweight papers, more appealing as a low cost alternative to thermo-fused melamine.

Offered in a wide array of colors, textures, embossing, glosses and patterns these papers are unsurpassed for clarity in wood grains. In addition, new techniques in coating and pre-impregnating have given these papers outstanding wear, scratch and mar resistance. A variety of paper thicknesses and topcoats allows for customizing a product for every need. If you haven't seen or tried one of these products lately, we think you will be surprised by their beauty and performance. Give us a call and ask for samples, and then let us help design the right paper and substrate for your needs.
